New Product Press Release - IBC 2016

F Series Connector for Satellite Broadcast Applications

Cambridge Electronic Industries designs precision F Series connector for high speed satellite communication systems

Cambridge Electronic Industries is a specialist manufacturer of RF connectors for the broadcast industry. This F series connector has been produced to meet the high performance standards required in broadcast satellite modulating and demodulating applications. Superior design techniques, high build quality and the use of precision turned parts enable Cambridge Electronic Industries to produce a connector with the tight impedance characteristics required for such demanding

applications. With an impedance of 75 ohm and a reflection factor (VSWR) of 1.3 Max between 0.0 and 3.2 GHz this F connector is uniquely positioned for use in high speed broadcast satellite communication systems.

For further information contact our design team at IBC 2016.
